## 0620/42

May/June 2025

**1 hour 15 minutes**

You must answer on the question paper.

No additional materials are needed.

- Answer **all** questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do **not** use an erasable pen or correction fluid.
- Do **not** write on any bar codes.
- You may use a calculator.
- You should show all your working and use appropriate units.

- The total mark for this paper is 80.
- The number of marks for each question or part question is shown in brackets [ ].
- The Periodic Table is printed in the question paper.

This document has **16** pages. Any blank pages are indicated.

**BLANK PAGE**

1 Using numbers only, state the:

(a) percentage of nitrogen in clean, dry air

..... [1]

(b) typical operating temperature of the Contact process in °C

..... [1]

(c) number of metals in Period 3 of the Periodic Table

..... [1]

(d) number of halogens which are gases at r.t.p.

..... [1]

(e) typical temperature for the fermentation of aqueous glucose in °C

..... [1]

(f) number of unbranched structural isomers of  $C_4H_8$  which decolourise aqueous bromine

..... [1]

(g) number of covalent bonds in one molecule of ethanol

..... [1]

(h) number of carbon atoms in one molecule of propyl butanoate.

..... [1]

[Total: 8]

2 This question is about covalent compounds.

(a) State what is meant by a covalent bond.

.....  
 ..... [2]

(b) Chlorine(I) oxide,  $\text{Cl}_2\text{O}$ , is a simple molecule with covalent bonds.

(i) State what is meant by (I) in the name chlorine(I) oxide.

..... [2]

(ii) Complete the dot-and-cross diagram in Fig. 2.1 of a molecule of chlorine(I) oxide.

Show outer electrons only.

Fig. 2.1

[3]

(iii) Explain, in terms of structure and bonding, why  $\text{Cl}_2\text{O}$  boils at a low temperature and does **not** thermally decompose into its constituent elements,  $\text{Cl}_2$  and  $\text{O}_2$ .

.....  
 .....  
 .....  
 ..... [3]

(iv) Give **two** reasons why liquid  $\text{Cl}_2\text{O}$  is a poor conductor of electricity.

1 .....  
 2 ..... [2]

(c) Carbon and silicon(IV) oxide both exist as giant covalent structures.

(i) Name a giant covalent structure of carbon which conducts electricity.

..... [1]

(ii) Identify the particles responsible for the conduction of electricity in this covalent structure of carbon.

..... [1]

(iii) Silicon(IV) oxide contains silicon atoms, Si, and oxygen atoms, O.

Fig. 2.2 shows part of the giant covalent structure of silicon(IV) oxide.

Complete the diagram in Fig. 2.2 by adding the symbol for each of the 9 atoms shown.

**Fig. 2.2**

[2]

[Total: 16]

3 This question is about electrolysis.

(a) Complete the definition of electrolysis by filling in the missing words.

The decomposition of ..... compounds when .....  
or ..... by the passage of an electric current.

[3]

(b) Electrolysis of aqueous copper(II) sulfate is carried out using the apparatus shown in Fig. 3.1. The electrodes are made of platinum.

Fig. 3.1

(i) State whether the mass of the cathode increases, decreases or remains the same when platinum electrodes are used.

..... [1]

(ii) Describe the change in appearance, if any, of the electrolyte when platinum electrodes are used.

..... [1]

(iii) Describe what is seen at the anode when platinum electrodes are used.

..... [1]

(iv) Write the ionic half-equation for the reaction at the anode.

..... [3]

(c) The electrolysis is repeated using copper electrodes.

(i) State whether the mass of the cathode increases, decreases or remains the same when copper electrodes are used.

..... [1]

(ii) Describe the change in appearance, if any, of the electrolyte when copper electrodes are used.

.....[1]

(d) Aluminium is extracted from its purified ore by electrolysis.

(i) Name this ore of aluminium.

..... [1]

(ii) Name the substance added to this process to reduce the operating temperature.

..... [1]

(iii) Explain why the anodes need to be continually replaced during this process.

.....

..... [2]

[Total: 15]

4 Chromium is the element with atomic number 24 in the Periodic Table.

(a) The main ore of chromium is chromite. Chromite contains  $\text{FeCr}_2\text{O}_4$ .

$\text{FeCr}_2\text{O}_4$  reacts with carbon.

(i) Complete the equation for this reaction.

(ii) Suggest **one** disadvantage of extracting chromium by reacting chromite with carbon.

..... [1]

(b) Chromium can be mixed with nickel and other elements to form stainless steel.

Name the type of substance formed when a metal is mixed with other elements.

..... [1]

(c)  $(\text{NH}_4)_2\text{Cr}_2\text{O}_7$  is a compound containing chromium.

The negative ion in  $(\text{NH}_4)_2\text{Cr}_2\text{O}_7$  is  $\text{Cr}_2\text{O}_7^{2-}$ .

(i) State the sum of the oxidation numbers in the  $\text{Cr}_2\text{O}_7^{2-}$  ion.

..... [1]

(ii) The oxidation number of each O in  $\text{Cr}_2\text{O}_7^{2-}$  ions is  $-2$ .

Determine the oxidation number of each Cr in  $\text{Cr}_2\text{O}_7^{2-}$  ions. Show your working.

..... [2]

(iii) When  $(\text{NH}_4)_2\text{Cr}_2\text{O}_7$  is heated the following reaction occurs.

Calculate the volume of nitrogen gas produced at r.t.p., in  $\text{cm}^3$ , when 1.26 g of  $(\text{NH}_4)_2\text{Cr}_2\text{O}_7$  is heated using the following steps.

The  $M_r$  of  $(\text{NH}_4)_2\text{Cr}_2\text{O}_7$  is 252.

- Calculate the number of moles of  $(\text{NH}_4)_2\text{Cr}_2\text{O}_7$  used.

..... mol

- Determine the number of moles of  $\text{N}_2$  formed.

..... mol

- Calculate the volume of  $\text{N}_2$  formed at r.t.p. in  $\text{cm}^3$ .

.....  $\text{cm}^3$   
[3]

[Total: 9]

5 Alkali metals are reactive elements.

(a) State the group number of the alkali metals.

..... [1]

(b) Identify the alkali metal which:

(i) has the highest melting point

..... [1]

(ii) has the highest density

..... [1]

(iii) has the lowest reactivity

..... [1]

(iv) burns with a lilac flame

..... [1]

(v) is found in fertilisers to improve plant growth.

..... [1]

(c) Sodium sulfide,  $\text{Na}_2\text{S}$ , is an ionic compound.

Complete Fig. 5.1 to show the electronic configurations of the ions in sodium sulfide.

Show the charges on the ions.

Fig. 5.1

[3]

(d) Rubidium has only two naturally occurring atoms,  $^{85}\text{Rb}$  and  $^{87}\text{Rb}$ .

(i) State the term given to these naturally occurring atoms of rubidium.

..... [1]

(ii) Complete Table 5.1 to show the number of protons, neutrons and electrons in the atom and ion of rubidium shown.

**Table 5.1**

|           | $^{85}\text{Rb}$ | $^{87}\text{Rb}^+$ |
|-----------|------------------|--------------------|
| protons   |                  |                    |
| neutrons  |                  |                    |
| electrons |                  |                    |

[3]

(iii) The relative atomic mass of rubidium to one decimal place is 85.5.

Determine the relative abundance of  $^{85}\text{Rb}$  in rubidium. Express your answer as a percentage.

.....% [1]

[Total: 14]

- 6 Ethene,  $\text{C}_2\text{H}_4$ , is the first member of a family of similar compounds which contains the alkene functional group.

(a) State the term for a family of similar compounds which contain the same functional group.

..... [1]

(b) Determine the difference in relative molecular mass between  $\text{C}_2\text{H}_4$  and the next member in this family of similar compounds.

..... [1]

(c) Write the symbol equation for the complete combustion of  $\text{C}_2\text{H}_4$ .

..... [2]

(d)  $\text{C}_2\text{H}_4$  reacts with steam to form ethanol.

The process happens in a closed system and the reaction reaches an equilibrium.

The conditions for this process are  $300^\circ\text{C}$  and 60 atm pressure.  $\text{H}_3\text{PO}_4$  is used as a catalyst.

(i) Complete Table 6.1 to show the effect, if any, on the concentration of  $\text{C}_2\text{H}_4(\text{g})$  when the following changes to the conditions are applied.

Only use the words **increases**, **decreases** or **no change**.

Table 6.1

| change to condition                                       | effect on the concentration of $\text{C}_2\text{H}_4(\text{g})$ at equilibrium |
|-----------------------------------------------------------|--------------------------------------------------------------------------------|
| temperature is decreased                                  |                                                                                |
| some $\text{C}_2\text{H}_5\text{OH}(\text{g})$ is removed |                                                                                |
| pressure is increased                                     |                                                                                |
| a more effective catalyst is used                         |                                                                                |

[4]

(ii) Explain, in terms of collision theory, why the rate of the forward reaction increases if the temperature increases.

.....

.....

.....

.....

..... [3]

(e) Compound **B** has the displayed formula shown in Fig. 6.1.

Fig. 6.1

(i) Deduce the molecular formula of compound **B**.

..... [1]

(ii) State why compound **B** is unsaturated.

..... [1]

(iii) Draw the structure of **one** repeat unit of the polymer formed when compound **B** undergoes addition polymerisation.

[2]

(iv) Explain why 1 mol of compound **B** reacts with 2 mol of sodium hydroxide, NaOH.

.....  
 ..... [1]

(v) Calculate the volume, in cm<sup>3</sup>, of 0.250 mol/dm<sup>3</sup> NaOH that reacts with 0.100 mol of compound **B**.

volume = ..... cm<sup>3</sup> [2]

[Total: 18]
