Cambridge International Advanced Subsidiary and Advanced Level

MARK SCHEME for the March 2016 series

9706 ACCOUNTING

9706/32

Paper 3 (A Level Structured Questions),
maximum raw mark 150

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the March 2016 series for most Cambridge IGCSE® and Cambridge International A and AS Level components.

Workings

- 1 Depreciation on property $\$400\,000 \times 5\% = \$20\,000$
Allocated to production $\$20\,000 \times 70\% = \$14\,000$
Allocated to administration $\$20\,000 \times 30\% = 6000$
- 2 Depreciation on manufacturing plant and machinery
 $(\$350\,000 - \$230\,000) \times 20\% = \$24\,000$
- 3 Depreciation on office equipment $\$120\,000 \times 15\% = \$18\,000$
- 4 Year end unrealised profit $\$186\,000 \times 1 / (5 + 1) = 31\,000$
- 5 Water and electricity $\$14\,000 + 1500 = \$15\,500$
Allocated to production $\$15\,500 \times 80\% = \$12\,400$
Allocated to administration $\$15\,500 \times 20\% = \3100

(c) Responses could include:

transfer price includes unrealised profit
transfer price less unrealised profit represents the cost of finished goods
prudence concept
inventory valued at the lower of cost and net realisable value IAS 2

(1 mark) $\times$ three valid points

[3]

(d) Responses could include:

Arguments for 'should not continue'
not acceptable for external reporting
the % of mark-up is subjective

Arguments for 'should continue'
production department continues to be treated as profit centre
facilitates pricing
cost of production department is better controlled
compare efficiency, reward efficient managers
facilitates a system of responsibility accounting

Max 2 $\times$ 3 marks (1 mark for stating and 2 for development) for justification
(max 3 for arguments for should continue
max 3 for arguments for should not continue)
1 mark for recommendation

2 (a) (i) $1250 \div 50 = \$25$ (1) [1]

(ii) $(3050 \times 1000/100)$ (1) – 25 000 (1) – 4000 (1) = \$1500 (1of) [4]

[6]

(c) Chin should make this change (1) of decision

This would reduce costs (1) and hence increase profit on consignment (1) by $11 (1) \times \$160 = \1760 (1of)

Increased risk (1) Demand may fall (1) resulting in unsold inventory (1)

Finance may be required to buy all the inventory in one go (1) Borrowing may increase during the year (1) There may be an opportunity cost of surplus funds (1)

On average radios would stay in inventory much longer (1) with risk of obsolescence (1) or theft/damage (1)

Sumit might not be able to organise adequate storage space (1) with inventory holding costs and might require a higher rate of commission to cope with the added responsibility (1)

1 mark for decision

Total equity and liabilities	<u>582 000</u>

[5]

- (b) (i) dividend cover
 $(144\,000 - 2000) = 142\,000 / 54\,000$ (1) = 2.63 times (1)

- (ii) gearing ratio
 $125\,000(1) / 572\,000 \times 100 = 21.85\%$ (1) of

- (iii) return on capital employed
 $192\,000 / 572\,000(1) \times 100 = 33.57\%$ (1) of

[6]

- (c) Johnson plc has a higher dividend cover (1), a lower ordinary dividend per share (1) of \$0.09 (1) and a lower earnings per share (1) of \$0.24 (1) but a lower gearing ratio (1) a higher return on capital employed (1)

This means that Johnson plc is not borrowing as much from external sources proportional to the amount of capital employed compared to Samuel plc (1). Samuel has more risk. (1)

The capital the company is being used more efficiently as there is a greater return (1)

However the ordinary dividends could only be paid out of profits 2.63 times compared to 2.1 times for Samuel plc. (1). **Max 9**

[9]

- (d) The amount of dividend on ordinary shares is variable with the level of profits therefore for short term return Samuel plc may be better as the dividend return is much better (1) as is the earnings per share (1) Better in short term (1)

However Johnson plc has borrowed less from external sources (1) and is using its capital employed to achieve a greater return. (1) so may be better for long term growth (1)

Recommendation either Samuel or Johnson (1)

(d) Advice. (1)

Benefits – limited liability (1), easier to change ownership through shares (1), easier to raise capital (1), shareholders can be paid in dividends (1) and some customers / suppliers prefer dealing with companies rather than partnerships (1).

Limitations – stricter rules (1), more paperwork (1) and higher accountancy costs (1).

Divorce of ownership and control (1).

Max 2 benefits + 2 limitations

(c) Responses could include:

more accurate cost information to management for decision making, i.e. pricing
can monitor the efficiency of various activities
allocation of overhead is more fair because it is based on the activities consumed, not on an arbitrary allocation (i.e. labour hours)
can also allocate non-manufacturing overhead, i.e. administrative support.

(g) Responses could include:

Should change/should not change **(1)** recommendation

Jumal Limited set the selling price on cost-plus base, therefore accurate cost information is very important.

Comparing the traditional approach with activity based costing approach, if traditional approach is adopted, Alpha is under-costed (Alpha consumes a higher level of resources) while Beta is over-costed (Beta consumes a lower level of resources). This is the consequence of subsidisation.

The problem of product under costing and over costing gives rise to a wrong selling price setting.

(b) Responses could include:

Flexible budget facilitates variance analysis

Comparison with the actual result is more meaningful if the budget is at the same activity level of the actual result.

What the budget will be if the actual output is known? In contrast with static budget which is prepared at the beginning of the budget period, flexible budget is prepared at the end of the budget period. This facilitates comparing the actual result for control purpose.

More realistic.

- (d) (i) Adverse direct labour rate variance
- wage rate increases
 - trade union activity
 - inflation
 - use of more skilled labour
 - increase in overtime
 - poor labour supply increasing the rate per hour/ increase in minimum wage per hour.

Adverse direct labour efficiency variance

- workers not well trained
- workers with low skill
- poor working condition
- poor staff morale
- inefficient machine
