Paper 3 Structured Questions

May/June 2018

MARK SCHEME

Maximum Mark: 150

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the May/June 2018 series for most Cambridge IGCSE™, Cambridge International A and AS Level and Cambridge Pre-U components, and some Cambridge O Level components.

IGCSE™ is a registered trademark.

This document consists of **18** printed pages.

Cambridge Assessment
International Education

PUBLISHED**Generic Marking Principles**

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always **whole marks** (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

PUBLISHED**GENERIC MARKING PRINCIPLE 5:**

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

This may make the product uncompetitive reducing the levels of sales (1) and eventually profit (1) but depends on the increase in price by the competitors (1). It also depends on the price elasticity of demand of the product (1). The market may not accept an increase in price so by not increasing the mark-up they may gain customers (1). Accept other valid points. Question	Answer	Marks
2(b)	W1 $0.20 \times 1\,000\,000 = \\$200\,000$ (1) W2 $\\$2 \times 500\,000 = 1\,000\,000$ (1) $\\$0.40 \times 500\,000 = 200\,000$ (1) W3 $\frac{3\,000\,000}{2} = 1\,500\,000$ shares $\times \frac{2}{5}$ (1) = 600 000 shares issued $\times \\$2.25 = \\$1\,350\,000$ cash $\\$1\,200\,000$ (1) shares and $\\$150\,000$ (1) share premium W4 $\frac{4\,200\,000}{2} = 2\,100\,000$ shares $\times \frac{4}{10} = 840\,000 \times \\$2 = 1\,680\,000$ W5 $520\,000 - (64\,000 - 93\,000) = \\$363\,000$ (1)	
2(c)	The directors did act in the best interests of the shareholders (1) because: No interest is being paid on a loan. (1) This saves \$68 000 over 5 years which would have adversely affected both the cash flow (1) and the profitability of the business.(1) The drop in profitability may affect shareholder confidence and the market price of the shares. (1) The loan would increase the gearing (1) The capital repayment would also reduce the cash flow (1) and the potential for future dividend payments due to lack of cash. (1) Instead the shareholders could receive extra dividends. (1) This equates on the share issue and rights issue of an extra \$0.06 approximately per share (1) The company may not have had enough cash or profit to pay the extra dividend. (1) $\frac{4\,200\,000}{2} = 2\,100\,000$ shares $\times 0.50 = \\$1\,050\,000$ dividend (1)	7

PUBLISHED

Question	Answer	Marks
2(c)	The directors did not act in the interests of the shareholders (1) because: There has been a drop in the market price of each share of \$0.30. (1) With $\frac{5880\,000}{2}$ shares = 2 940 000 shares (1) × \$0.30 = \$882 000 (1) Although the market value may increase this may take time (1) Potential shareholders may question why a loan or a debenture was not taken out to finance the purchase of the factory instead of two share issues. (1) There is no future effects on cash flow (1) or profitability (1) except for the dividend payments (1) The money saved by making a bonus issue instead of paying extra dividends can be used on other areas within the business (1) The shareholders can sell these shares at a future date once the market price increases. $\frac{1680\,000}{2} = 840\,000$ shares × \$2.10 = \$1 764 000 (1) which is greater than the dividend suggested by the shareholder (1) Accept other valid points. (1) decision and 0–6 marks for comments on either side.

6(f)	As ABC provides more realistic figures (1) the selling prices will reflect a more realistic figure based on costs. (1) Using the old method Alpha showed a very high portion of overheads (1) and so its costs were too high (1) and a true figure is not reflected in the selling price (1) Omega bears a disproportionately low amount of overheads (1) and so is underpriced (1) Costs in the old method are set simply using only one basis. (1) The setting of the costs using ABC will enable the company to carefully investigate the basis (1) and will result in improved production methods as well as better pricing. (1) 3 x 2 marks each (1 mark for stating the reason and 1 mark for development) Accept other valid points.	6																																				
6(g)(i)	Alpha profit $\\$135.20 \times 60\% = 81.12 \times 20\,000 = \\$1\,622\,400$ (1) Omega profit $\\$148.50 \times 30\% = 44.55 \times 8\,000 = \\$356\,400$ (1)	2																																				
6(g)(ii)	The actual total profit will rise from \$1 946 000 to \$1 978 800 an increase of \$32 800 (1) The price of Alpha will fall and Omega will rise bringing them both nearer to their previous price (1) Fixes higher prices for the product which is higher in demand and needs specialist workforce (1) which is justified and lower price for Omega which does not need specialist workforce as the rate of labour is lower (1) Accept other valid points.	2
