Paper 5 Probability & Statistics 1

February/March 2025

1 hour 15 minutes

You must answer on the question paper.

You will need: List of formulae (MF19)

INSTRUCTIONS

- Answer **all** questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do **not** use an erasable pen or correction fluid.
- Do **not** write on any bar codes.
- If additional space is needed, you should use the lined page at the end of this booklet; the question number or numbers must be clearly shown.
- You should use a calculator where appropriate.
- You must show all necessary working clearly; no marks will be given for unsupported answers from a calculator.
- Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place for angles in degrees, unless a different level of accuracy is specified in the question.

INFORMATION

- The total mark for this paper is 50.
- The number of marks for each question or part question is shown in brackets [].

This document has **16** pages. Any blank pages are indicated.

- 1 Jacob throws three coins at the same time.
 The first coin is biased so that the probability of obtaining a head when it is thrown is $\frac{1}{3}$.
 The second coin is biased so that the probability of obtaining a head when it is thrown is $\frac{1}{4}$.
 The third coin is biased so that the probability of obtaining a head when it is thrown is $\frac{1}{5}$.
 The random variable X is the number of heads obtained.

(a) Show that $P(X = 2) = \frac{3}{20}$. [1]

[2]

This image shows a full page of a handwriting practice worksheet. It consists of approximately 20 horizontal rows. Each row is defined by two parallel dotted lines, creating a series of uniform gaps for letter height. The lines are evenly spaced across the entire page, providing a guide for consistent letter formation. There is no text or other markings on the page.

- 2 Last year, an online store sold a large number of computers. 55% of the computers were made by company F , 30% were made by company G and 15% were made by company H .

A random sample of 3 customers who each bought a computer from this store is chosen.

- (a) Find the probability that the 3 customers bought computers all made by different companies. [1]

.....

.....

.....

.....

.....

.....

.....

.....

A random sample of 12 customers who each bought a computer from this store is chosen.

- (b) Find the probability that fewer than 10 of these customers bought a computer made by company F . [3]

- [illegible]

- 3 The lengths of 250 leaves of a certain type of plant are measured, correct to the nearest centimetre. The results are summarised in the table below.

Length (cm)	5 – 9	10 – 14	15 – 19	20 – 24	25 – 29	30 – 39
Frequency	18	28	60	72	48	24

- (a) On the grid below, draw a cumulative frequency graph to illustrate this information.

- [3]

This image shows a full page of a document template designed for handwritten notes or essays. It features approximately 28 evenly spaced, thin grey horizontal lines across the entire width of the page. The margins are consistent on all sides, providing ample space for writing. There are no pre-printed questions, headings, or other markings on the page.

- (a) Find the probability that all three cars are the same colour. [3]

This image shows a full page of white paper with horizontal dashed lines, typical of primary school writing paper. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

[4]

[illegible]

- (a) Find the probability that the mass of peaches sold on any given day is between 56 kg and 75 kg. [3]

[illegible]

The mass of cherries sold per day in a supermarket is normally distributed with mean 72.4 kg and standard deviation σ kg. It is known that on 10% of days less than 59.1 kg of cherries are sold.

- (b) Find the value of σ . [3]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

The supermarket is open 7 days a week.

- (c) Find the probability that, in a randomly chosen week, the first day on which less than 59.1 kg of cherries are sold is the fifth day of the week. [1]

.....

.....

.....

- (d) Find the probability that, in a randomly chosen week, the first day on which less than 59.1 kg of cherries are sold is before the fifth day of the week. [2]

- Alissa places the books in a row on her shelf. She is only interested in the arrangement of the colours.

- [illegible]

- [illegible]

- (c) How many different colour arrangements are there of the 10 books with exactly 4 books between the 2 yellow books? [3]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

Alissa selects 4 books from her 10 different books from the series Squares and Circles.

- (d) Find the number of different selections if the 4 books include at least 1 red book, at most 1 blue book and exactly 1 yellow book. [4]
