Paper 6 Probability & Statistics 2

May/June 2025**1 hour 15 minutes**

You must answer on the question paper.

You will need: List of formulae (MF19)

INSTRUCTIONS

- Answer **all** questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do **not** use an erasable pen or correction fluid.
- Do **not** write on any bar codes.
- If additional space is needed, you should use the lined page at the end of this booklet; the question number or numbers must be clearly shown.
- You should use a calculator where appropriate.
- You must show all necessary working clearly; no marks will be given for unsupported answers from a calculator.
- Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place for angles in degrees, unless a different level of accuracy is specified in the question.

INFORMATION

- The total mark for this paper is 50.
- The number of marks for each question or part question is shown in brackets [].

This document has **16** pages. Any blank pages are indicated.

BLANK PAGE

- 1 The random variable X has the distribution $\text{Po}(1.5)$. The sum of three independent values of X is denoted by S .

(a) Find $P(S \leq 3)$. [3]

2

$n = 200$

$$\Sigma(x-2) = 60$$

$$\Sigma(x-2)^2 = 20$$

(a)

[6]

This image shows a full page of white paper with horizontal dotted lines. The lines are evenly spaced and run across the width of the page, providing a guide for handwriting practice. There are no margins, text, or other markings on the page.

(b)

[1]

[illegible]

- 3 Maroulla's calculator can generate random numbers between 0.000 and 0.999 inclusive, correct to 3 significant figures. She plans to use her calculator to choose a sample of members from the 851 members in her health club. She numbers the members from 1 to 851. Then she uses her calculator to generate some random numbers. She multiplies each random number by 851 and rounds **up** to the next whole number to give the number of a member in the sample. This is called a 'member number'.

- (a) Maroulla's first random number is 0.401.

Find the member number that is produced by this random number. [1]

.....

.....

.....

.....

- (b) Find all possible random numbers, correct to 3 decimal places, that would produce the following member numbers.

- (i) A member number of 680. [1]

.....

.....

.....

.....

.....

- (ii) A member number of 850. [1]

.....

.....

.....

.....

.....

- (c) Explain briefly how your answers to part (b) show that Maroulla's method does not produce a random sample. [1]

- Find the probability that the mean, $\bar{F}$, of the final marks of a random sample of 25 candidates is greater than 143. [5]

- (a) Use a binomial distribution to carry out the test. [5]

[illegible]

(c) Find the probability of a Type I error. [2]

[illegible]

- 7 A firm makes a certain type of battery-powered toy. The battery life is denoted by X hours and the population mean of X is supposed to be 12. The Quality Control department wished to test whether the population mean of X is actually less than 12. They tested a random sample of 50 of these toys and found that the sample mean, $\bar{X}$, was 11.4.

- (a) State suitable null and alternative hypotheses for the test. [1]

.....

.....

.....

You may assume that the standard deviation of the battery life is 2.3 hours.

- (b) Show that the value $\bar{X} = 11.4$ leads to rejection of the null hypothesis at the 5% significance level. [2]

.....

.....

.....

.....

.....

.....

.....

.....

- (c) It is given that the value $\bar{X} = 11.4$ leads to rejection of the null hypothesis at the $\alpha\%$ significance level.

Find the set of possible values of α . [2]

.....

.....

.....

.....

.....

.....

.....

.....

.....

It is given that the median of X is $\sqrt{2}$.
